Задание

Модифицировать код ЛР 8 таким образом, чтобы запросы, которые были ранее выполнены, сохранялись в БД и при следующем запросе не требовали повтора вычислений.

- •Сформировать модель в соответствии с потребностями хранения данных. Входные параметры являются ключами, по которым извлекается результат.
- •Выполнить создание БД и миграцию соответствующими запросами rake.
- •Написать тест на добавление и поиск данных с помощью модели. Проверить выполнение теста.
- •Модифицировать код приложения таким образом, чтобы результат вычислений преобразовывался в строковый или бинарный формат (на выбор: json, xml, и пр.). Проверить через отладочную печать в консоль, что преобразование выполняется корректно.
- •Вставить код для сохранения данных в БД и запрос на поиск предыдущего результата вычислений.
- •Добавить действие в контроллер, позволяющее определить, что хранится в БД через сериализацию в XML.
- •Проверить, что при выполнении запроса, данные добавляются в БД.
- •При помощи консоли сообщений Webrick определить, производится ли поиск результата предыдущего запроса в БД и не повторяются ли одни и те же вычисления.
- •Модифицировать модель таким образом, чтобы добавление записей с одинаковыми параметрами было невозможно.
- •Реализовать тест модели, проверяющий невозможность повторного добавления одних и тех же результатов вычислений.
- •Реализовать функциональный тест, проверяющий, что результаты вычислений различны при различных входных параметрах.
- •Проверить маршруты приложения с помощью rake routes и убрать лишние. Обеспечить доступ при обращении по адресу /.
